

INTERIOR SCONCES

BRASS SCONCES

Brass candle-burning and electric sconces are provided with all mounting hardware. Most candle-burning sconces have removable arms for cleaning. When provided with glass shades all candle-burning sconces have open holes in the shade base to allow air to pass into the shade for the candle flame, if these holes fill with wax the candle flame may not burn correctly, periodic cleaning is required.

All electric sconces are reproductions of antiques and some of the mounting plates are smaller than electric boxes. We can tell you which of these fixtures require a bit of work to install over a modern junction box. We do offer a few sconces that have arms to match our chandeliers, so you can coordinate them within the same room if desired. Standard finish is polished brass with no lacquer coating. This finish will require at least annual hand polishing if you wish it to remain highly polished. We can apply a lacquer coating to these fixtures at an added cost. Other optional finishes are available including: antique brass and silver plated finishes

- W160-ES1 electrified, single arm with shade, 6" h × 4" w backplate, 12" standout
- W160-ES2 electrified, double arm with shades, 6" h × 4" w backplate, 17" wide
