

Interior Sconces

TIN SCONCES

Our tin sconces are all produced by our expert Tinsmiths, in both candle-burning and electric versions. The candle burning sconces are provided with a hand forged nail for mounting, the electric versions are required by code to mount directly to a grounded junction box so the back side of the electric fixtures are a bit different. They mount with a small nut and mounting strap to the junction box. All fixtures are available in the following finishes: bright tin, antique tin, pewter, brass and antique brass.
